

Writing & Identifying Chemical Reactions

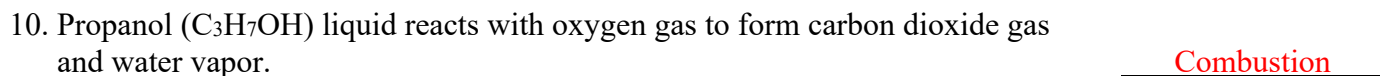

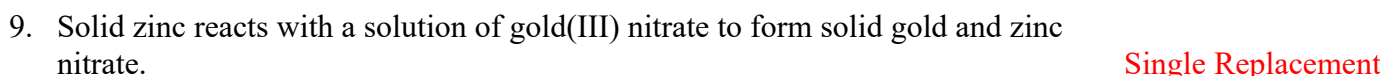

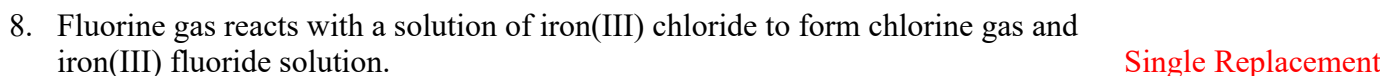

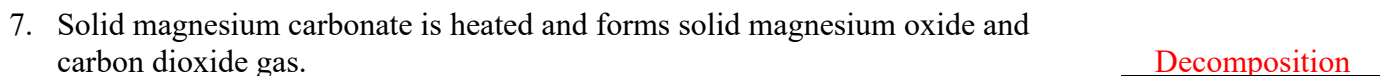

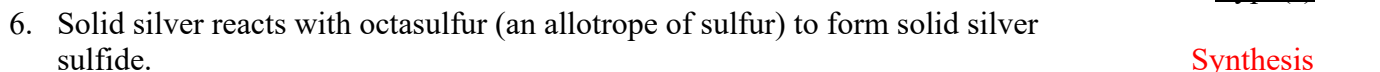

Balance the following skeleton equations, then identify the type of each reaction.

Type(s)

Write and balance the skeleton equations described below, then identify the type of each reaction.

Type(s)

For the next reactions, complete the reaction by filling in the blanks with the correct formulas. Then balance and identify the type of each reaction. Determine the state of any elements, but you do not need to indicate the state of any compounds.

Type(s)
